

SIH26034 — Problem & MVP Scope v2

FINAL REFERENCE PACK v2 — audited against the current SIH26034 blueprint/build prompts and current official-source requirements.

Official alignment

SIH26034 requires packaged-commodity image scanning, mandatory-declaration detection, correctness/completeness/placement checks, missing/non-compliant declaration detection, readability/font-size analysis, reports, repository/history, enforcement dashboard, search/retrieval, role-based access and PDF/editable export.

MVP

Officer login; server case ID; inspection lifecycle; front/back mandatory evidence; optional side/base; SHA-256 on arrival; quality gate; calibration; OCR boxes/confidence; structured extraction; deterministic versioned rule engine; multi-view merge; officer correction/re-analysis; dashboard; history/search; case detail; evidence register; report generation and verification.

Trust boundary

AI may read/structure text but never decides compliance. Every finding exposes rule version, inputs, provenance, observed value, expected condition and evidence. Officer review remains authoritative.

Scope control

P0 must work for demo. P1 follows stable P0. Offline sync, PostgreSQL migration, advanced analytics, digital signature certificates, external departmental integration and advanced tamper forensics are P2.

Forensic features

Unit-sale-price consistency; physical calibration/print-height measurement; price-overwrite suspicion; immutable evidence; versioned rules; multi-view inspection; correction loop; verifiable reports.
