

SIH26034 — Premium Government UI/UX Specification v2

FINAL REFERENCE PACK v2 — audited against the current SIH26034 blueprint/build prompts and current official-source requirements.

Design

Premium government enforcement terminal: precise, restrained, high-trust and operational—not a consumer SaaS site.

Screens

Login; command dashboard; new inspection; inspection workbench; case detail; history/search; evidence register; finalise/report; report verification; settings/health.

Dashboard

Officer identity, connectivity/system status, total/compliant/non-compliant/manual-review counts, recent cases and priority items. Avoid vanity analytics.

Workbench

Original evidence in a viewfinder with zoom/pan/reset and role selector; OCR boxes; selected field; calibration anchor; measured character region; suspected overlay; extracted values/confidence/provenance/edit controls; rule rail; evidence strip; action bar.

Interaction

Field↔region linking; edits immediately mark determination stale; server re-analysis produces the new status; expanded rules show the same calculation wording used in the report.

Visual system

Forensic dark zinc surfaces, thin borders, sharp small-radius geometry, Inter UI text, JetBrains Mono for measurements/IDs/hashes, no heavy shadows. Status colors reserved for meaning.

Accessibility

Readable type and contrast are P0. A light/field mode is P1. Do not rely on tiny uppercase labels as the only communication mechanism.

Motion

Mechanical micro-interactions under ~150ms; restrained short extraction scramble; never obscure evidence/status.
